SUMMARY

Architect with 11 years of professional experience on commercial, residential, hospitality and infrastructure projects from concept to completion, across India and the Middle East, plus a two-year Master of Property Investment and Development from Western Sydney University. Skilled in AutoCAD, SketchUp and Revit BIM modelling, coordinating with consultants and stakeholders, and delivering well-documented architectural solutions. Builds AI-driven tools for CAD and BIM workflows, taking a hand sketch through to working drawings and 3D models, with a focus on reliable output rather than tool usage.

AI & Automation Projects

- **Prārūpa:** Workflow that takes a hand sketch to concept, working DWG drawings and a 3D model: FreeCAD for technical BIM, Blender for visuals and three.js for an interactive model for end users. Includes an automated review step that reports every correction and assumption. Currently being refined.
- **MCP integrations:** AI models working directly inside AutoCAD, Revit, SketchUp and Blender, used daily in practice; now moving to headless operation.
- **AI in daily practice:** Using AI across everyday project work to reduce time and effort on repetitive drafting and documentation while producing better, more consistent results.
- **Sketch-to-image and YouTube narrator:** AI tools for quick concept visuals and automated video narration, built for my own work.
